OnlyFleets™

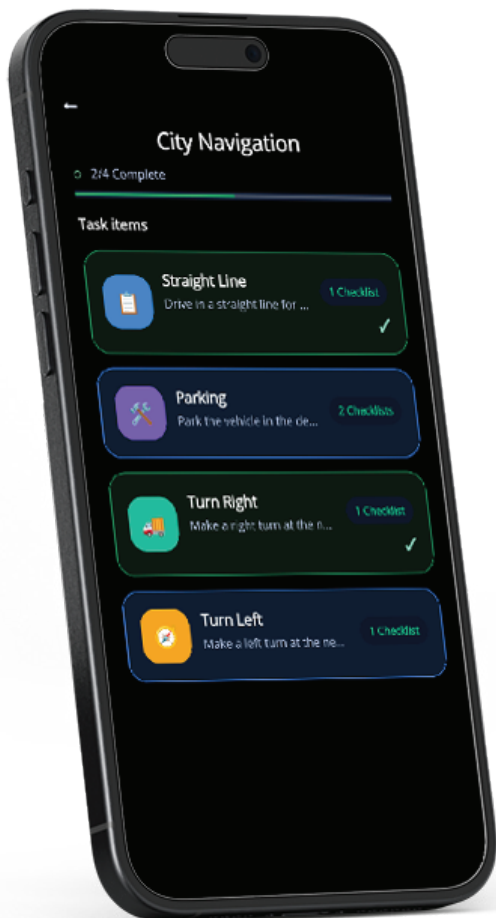

Navigate your Passion

The Central Hub for Vehicle Validation

OnlyFleets™

OnlyFleets is an advanced web and mobile solution that elevates the vehicle testing experience through seamless and fully digital workflows. What once relied on fragmented, manual note-taking is now unified into a precise, efficient, and elegantly orchestrated process—empowering test drivers and fleet managers with effortless control and exceptional clarity.

Accelerate Your Validation Process

OnlyFleets is designed to eliminate bottlenecks, improve data quality, and give you complete control over your entire testing lifecycle.

- **Unified Command Center:** Deploy complex testing plans in minutes with a single source of truth for all vehicles, personnel, routes, and tasks. Streamline coordination across your entire validation team.
- **Empowered Drivers:** Deliver clear, daily instructions and step-by-step test execution guidance with the intuitive OnlyFleets Driver App. Ensure consistency and quality in every test run.
- **Seamless Data Flow:** Ensure data integrity from task assignment to final report with real-time capture of notes, photos, and test parameters. Eliminate manual data entry and reduce errors.

Administration Console

The strategic heart of your testing operation, providing total oversight and control from a powerful web-based application.

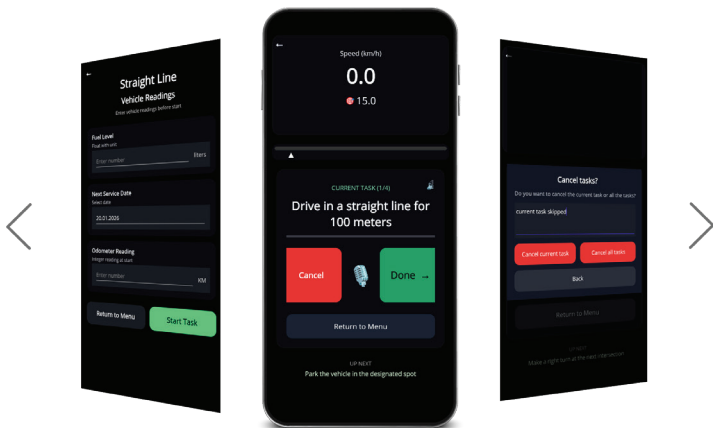

- **Vehicle & Driver Management:** Track vehicle status, software versions, maintenance, and driver qualifications.
- **Route & Task Orchestration:** Build and manage a library of test routes and design granular test plans with ease.
- **Live Fleet Monitoring:** Visualize your entire operation with a real-time GPS map and monitor progress against plans.

Driver Companion App

The tactical tool for flawless in-field execution by your drivers, available on both iOS and Android.

- **Checklists:** Guides the drivers through all required checks before, during and after a task is performed.
- **Daily Task Briefing:** Drivers log in to a clear, prioritized list of their assigned tasks for the day.
- **Guided Test Execution:** Step-by-step instructions for complex test procedures ensure consistency.
- **In-Field Data Capture:** Easily input observations, submit media, and complete forms directly in the app, even offline.

Engineered for Demanding Applications

ADAS & Autonomous Validation

Comprehensive testing protocols for advanced driver assistance systems and autonomous vehicle features with real-world scenario validation.

Proving Ground Management

Complete oversight and coordination of proving ground operations with optimized resource allocation and scheduling.

Software & ECU Release Testing

Systematic validation of electronic control units and software releases across multiple vehicle platforms and configurations.

Public Road Data Collection

Structured data gathering from real-world driving scenarios to enhance vehicle development and validation processes.

Durability & Reliability Testing

Long-term testing programs to ensure vehicle components and systems meet stringent durability and reliability standards.

Vehicle Benchmarking

Comparative analysis and performance benchmarking against competitor vehicles and industry standards.
